

Final Report: Environmental Site Assessment

EVS 248 Environmental Geology and Hydrology

Fall, 2011

The purpose of this lab is to allow you to pull together much of what we've learned this semester.

The structure of your final report will be that of the example we saw in the presentation by Mr. Brimeyer. The outline you are to follow is below:

1. Introduction, including site description.
2. Physical setting.
3. Historical use information, including maps and records.
4. Records review (highlights of the Raidus Report).
5. Site reconnaissance.
6. Adjoining property.
7. Additional services (soil sampling, geotechnical analysis, asbestos, lead paint, etc.)
8. Findings, Conclusions, and Recommendations.

You may also include appendices. You should plan on printing the document with a title page, table of contents, list of figures, list of tables, and an executive summary.
